CLAIMS

1. A quickly soluble film product, for treating milk with bacteria and/or enzymes, consisting of a solid support comprising at least one substance chosen from the group formed from at least one starch of low molecular weight and high amylopectin content and from at least one cellulose compatible with said starch, wherein said solid support incorporates at least one bacterium or enzyme of the type commonly used for milk treatment.

2. A product as claimed in claim 1, wherein said bacteria or enzymes consist of probiotic, prebiotic and/or symbiotic lactic acid cultures.

3. A film as claimed in claim 2, wherein said food bacteria are chosen from the group consisting of lactic acid bacteria, bifidobacteria, non-lactic acid bacteria and non-bifidobacteria microorganisms.

4. A film as claimed in claim 1, wherein said cellulose is selected from the group consisting of hydroxypropylmethylcellulose and hydroxyethylcellulose.

5. A film as claimed in claim 2, wherein said cellulose is selected from the group consisting of hydroxypropylmethylcellulose and hydroxyethylcellulose.

6. A film as claimed in claim 3, wherein said cellulose is selected from the group consisting of hydroxypropylmethylcellulose and hydroxyethylcellulose.
